

Online Cooking Recipe Portal System

The aim of this Cooking Recipe Portal project is to develop an online system by utilization of which a user can learn different sorts of the formula. This framework can be useful for a café or to the teacher who instructs the cooking as they can spread their formula to the next. The user can likewise post their formula on the site. As the Cooking Recipe Portal framework will be founded on the web, the user can take in the formula from wherever and can see the formula any number of times. The users can offer input to the formula.

COOKING RECIPE PORTAL MODULE:

Registration: If a user wants to share the recipe has to register to the system by providing essential details to the system.

Login: The user will need to login to access their profile. Only the logged in person can upload or delete the recipe. During login, the user needs to give ID and password to the system.

Profile: Through this module, the user can edit the details about them.

Recipe: This module will divide the information about the different method according to the types of vegetarian, non-vegetarian or according to the state so that it will be easy to find any recipe.
